The Common Council
Fort Wayne, Indiana

Gentlemen and Mrs. Schmidt:

City Utilities Purchase Requisition for a three months supply of liquid ferrous sulfate has been prepared prior to issuance of a purchase order for same, as requested by the Water Pollution Control Plant. By-Products Management, Inc. has agreed to supply our needs for a three month test period, ending March, 1979. This liquid ferrous sulfate will be used on phosphorous removal at the WPC Plant. If testing is successful, this will cut chemical costs from $300,000.00 to $100,000.00 per year.

Since we are half-way through January, Board of Works respectfully requests "Prior Approval" so that this requisition may be processed and the chemical ordered as soon as possible in order to facilitate this cost-cutting operation.

Special Ordinance for formal approval will be submitted in the very near future.

Sincerely,

BOARD OF PUBLIC WORKS

HENRY P. WEHRENBERG, CHAIRMAN

Memorandum

From Paul L. Brunner

Subject WPC-Plant Test Run Phosphorous Removal Iron Sulfate

COPIES TO:

We are enclosing our requisition No. 2 covering the purchase of a three (3) months supply of liquid Ferrous Sulfate for phosphate removal.

This material is a problem waste in the steel industry from pickling operations and can be obtained at a fairly low cost and could possibly drop our phosphorous chemical costs from $300,000.00 to $100,000.00 per year.

All of our test work four years ago was based on using ferric chloride. The question remains, will the ferrous material do the job? We feel it will be oxidized to the ferric state in the aeration tanks.

Our plan is to feed this material to our secondary units 1 thru 5 and continue to use alum in the normal fashion to tanks 6 thru 9 for a three (3) month period, January through March 1979.

We will be looking at the following in this study.

1. Will it effect the single stage nitrification process (ammonia removal and the activated sludge.

2. B.O.D. and T.S.S. removal efficiency.

3. Possible increase in heavy metal ion content of effluent.

4. Increase in sulfate content and its effect on effluent quality.

5. Evaluate handling problems because of its corrosive properties. (Free sulfuric acid), and recrystallization at lower temperatures.

6. Feed requirements so as to determine the ultimate cost savings in going to full plant use.

Some minor changes in piping (plastic) is required. Material for this has been purchased and we are ready to move pending the issuance of a purchase order.

For these reasons we would appreciate your consideration of getting prior approval from City Council to permit actual use of this material by January 15, 1979.
